Design Camp!!!

Student Collaboration in Solving Local and Global Water Problems

Design thinking is human-centered innovation. It is an orientation toward learning that encompasses active problem solving and believing in one’s ability to create meaningful change. Becoming a design thinker is about developing a sense of creative confidence that is both resilient and highly optimistic.

A focus on innovation, creativity, critical thinking, problem solving, communication and collaboration is essential to prepare students for the future. Design thinking can help us imagine new possibilities for learning that will change the lives of students in powerful ways as they confront the challenges and possibilities of the 21st century.

By diving into a hands-on experiential workshop, students will engage in the process of design thinking as it applies to global and local issues related to water. Student teams will collaborate on the design of specific solutions to pressing issues about water conservation, access, and scarcity.

March 26-30, 2012
Monday – Thursday 9:00-3:00
Friday 9:00-12:30
